Four Things to Remember

- CT is the future
- IP Telephony is a catalyst
- Interoperability specifications are the key
- You're in the driver's seat

1.

Computer Telephony is the Future

It's Inevitable...

■ The Computer

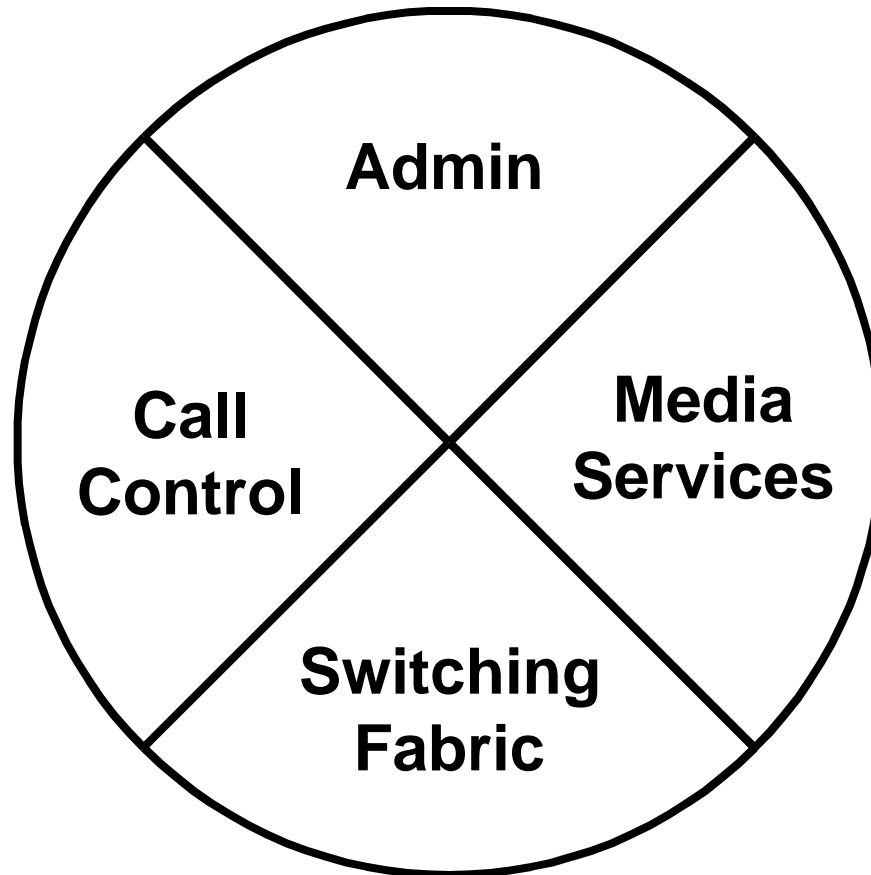

- the new desktop

■ The Telephone

- the most ubiquitous appliance in the world

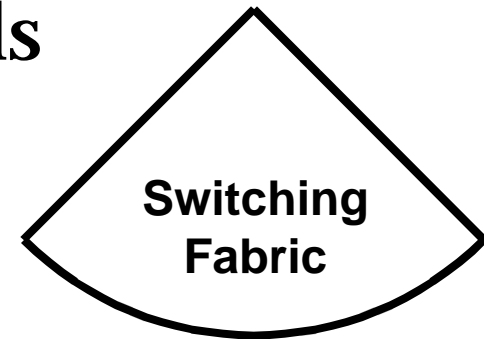

Telephone System Technologies

Switching Fabric

- Establishes media stream channels between endpoints and conveys signaling information
- Traditional Switching Fabric
 - TDM bus backplanes connecting line cards
 - Analog (POTS) and digital (T-1, ISDN, proprietary) telephony circuits
- IP Telephony Switching Fabric
 - Packetized voice over conventional IP networking infrastructure
 - Typically based on off-the-shelf computer technology

CTI Defined

■ Call Control

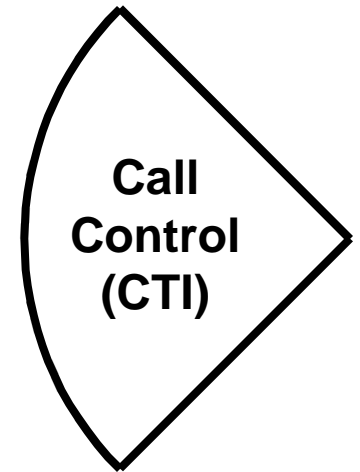

- Monitoring and directing calls in a telephone system

■ Telephone Control

- Monitoring and controlling features of a telephone set

■ Media Binding

- Relating other communications/telephony functionality to calls in a telephone system

CT Media Access/Services

- Tone Detection and Generation
- Recording and Playback
- Text-to-Speech
- Speech Recognition
- Modulated Data (Modem/Fax)
- Digital Data (Compressed Video, etc.)
- Call Binding

Admin

- **System configuration**
 - System customization
 - Moves / Adds / Changes
- **Fault monitoring**
- **Accounting**
- **Performance management**
- **Security**

The Promise of CT Technology

Telephone systems
that are
tailored
to the
specific needs and preferences
of users

2.

IP Telephony is a Catalyst

Motivation for Single Network

■ Engineering

- Because we can?
- More elegant?

■ Economics

- Cheaper to Install?
- Cheaper to Maintain?

■ Applications

- New capabilities?
- New flexibility?

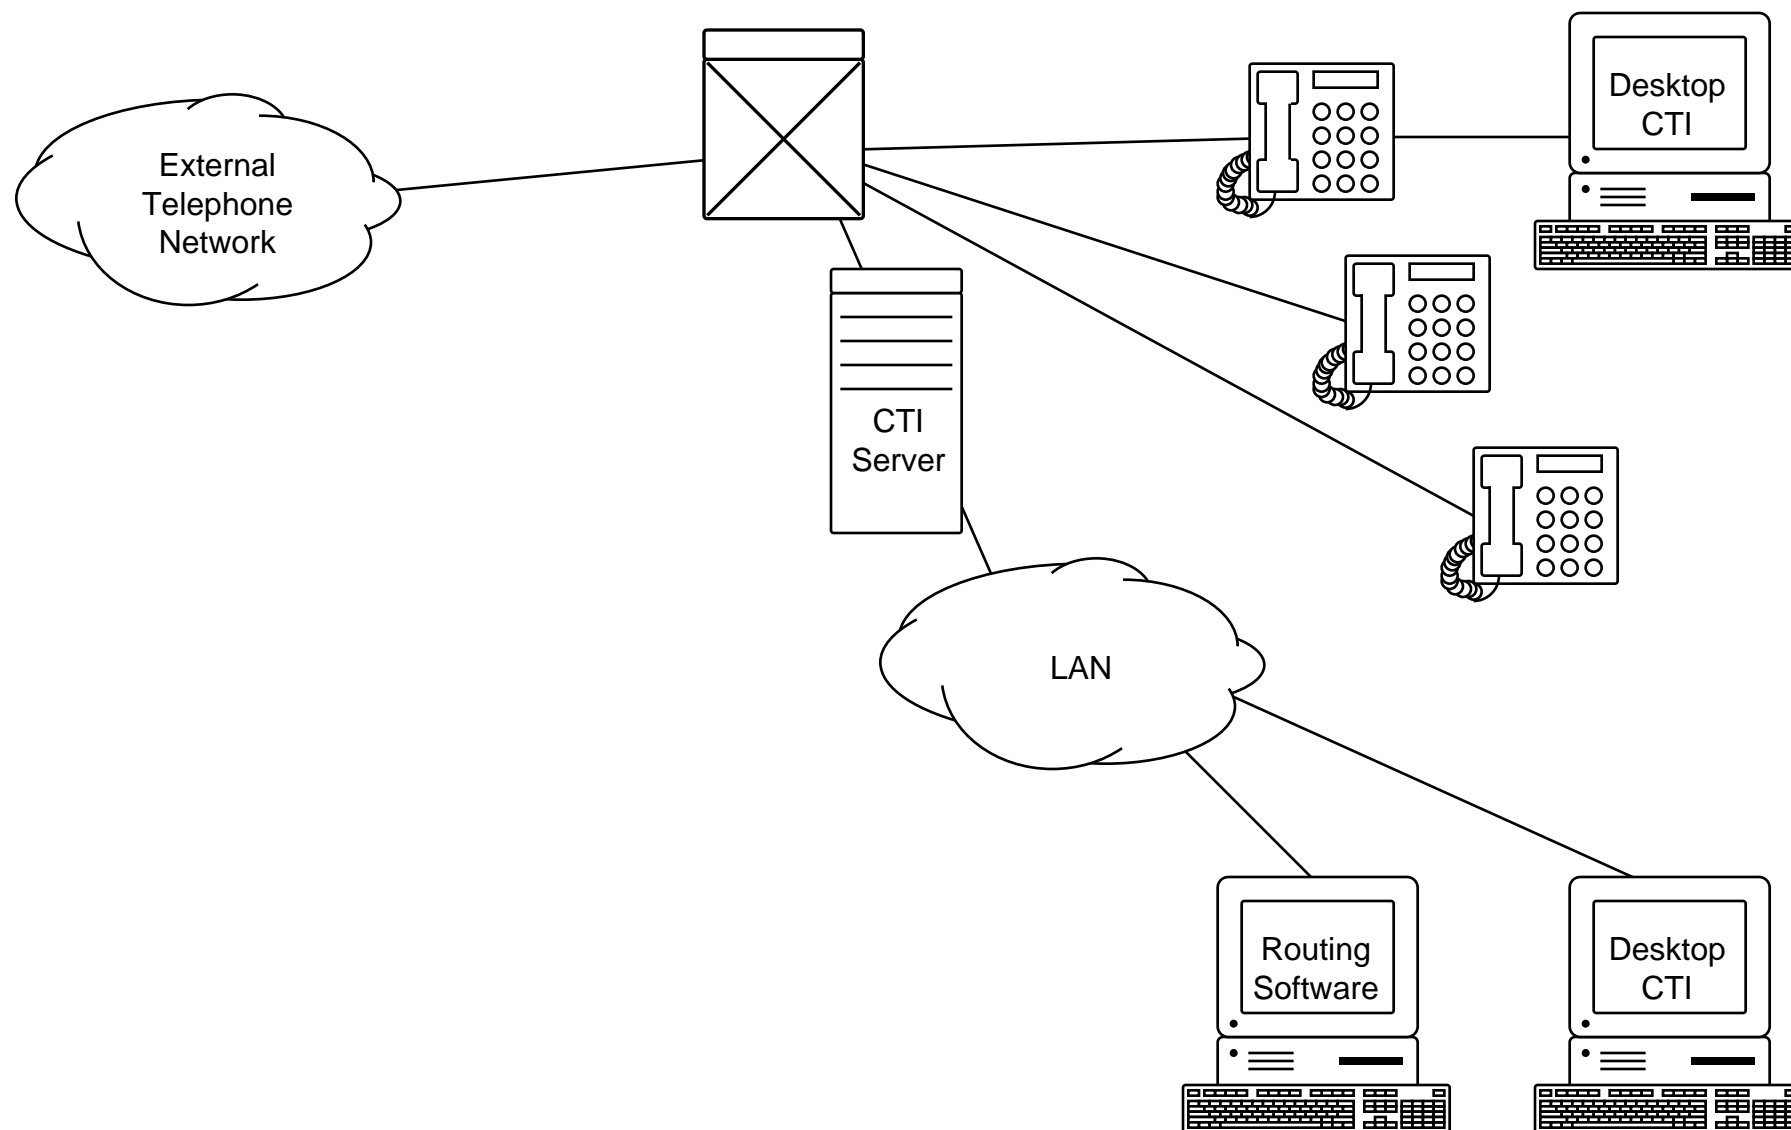

CT in Traditional Configurations

IP Telephone System Implementation

IP Telephone System Implementation

IP Telephone System Implementation

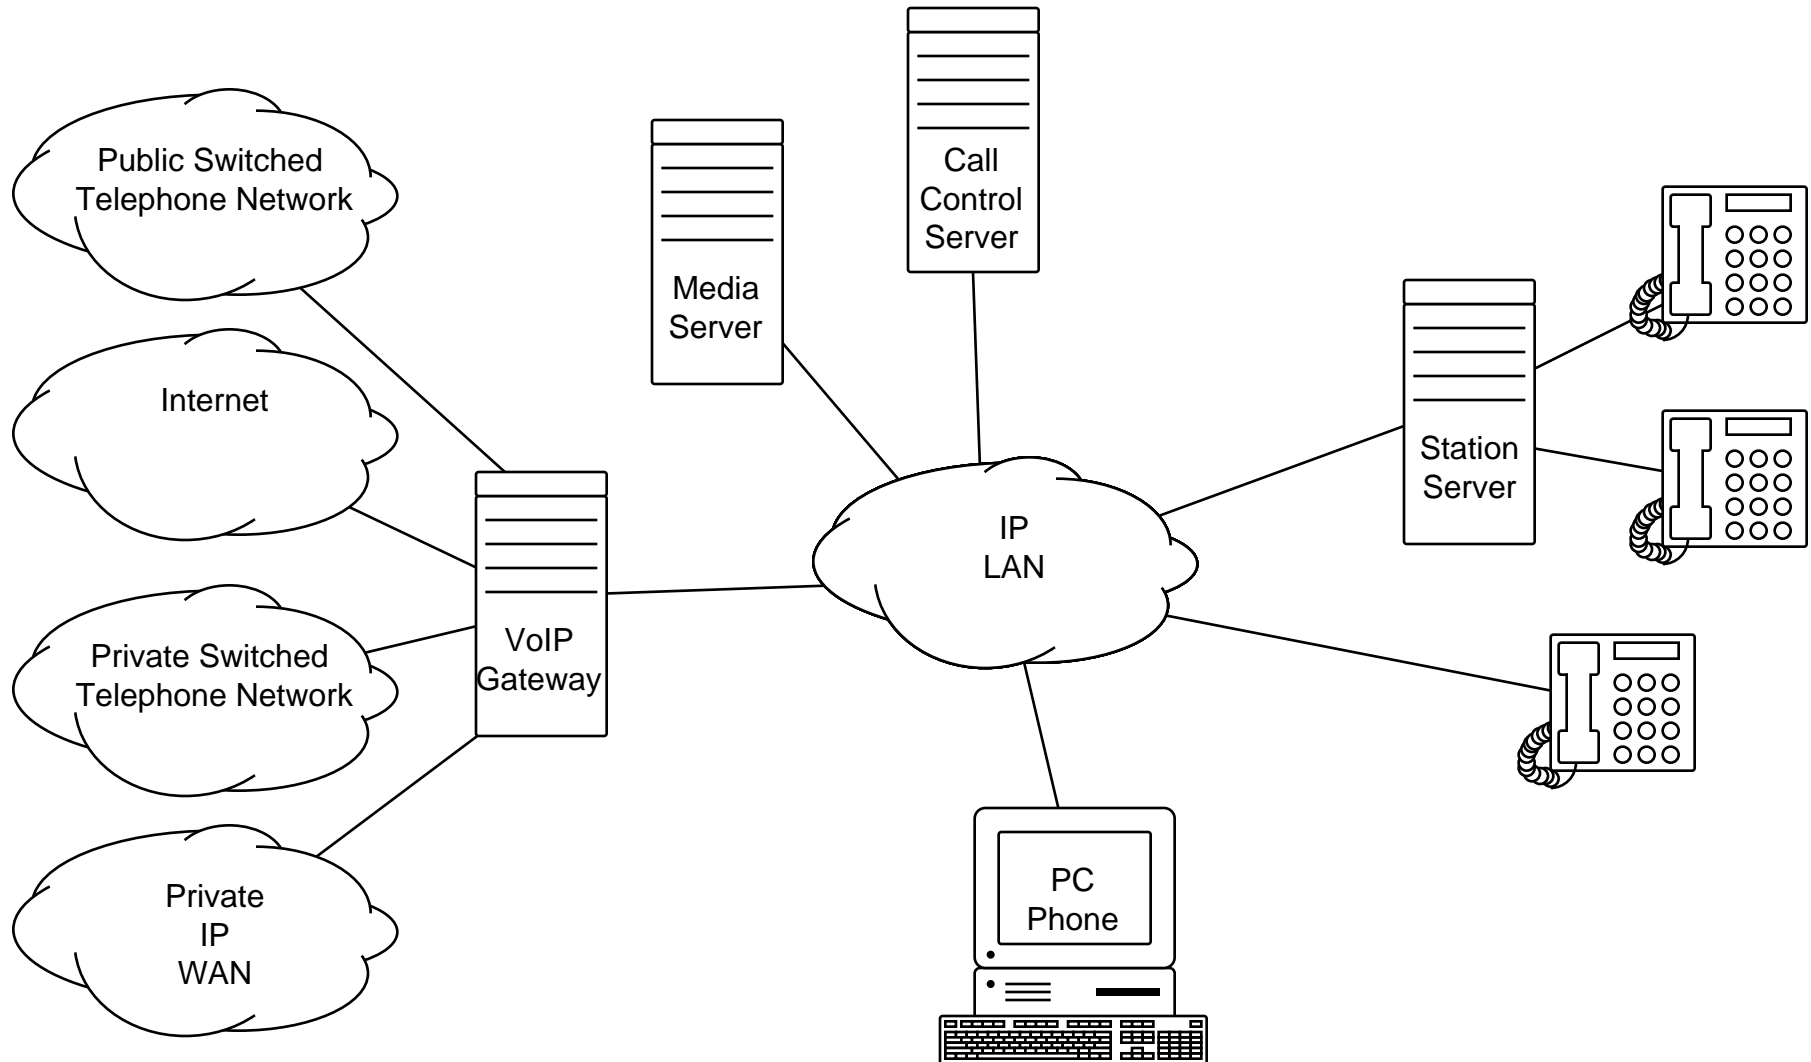

IP Telephone System Implementation

IP Telephony is a Catalyst

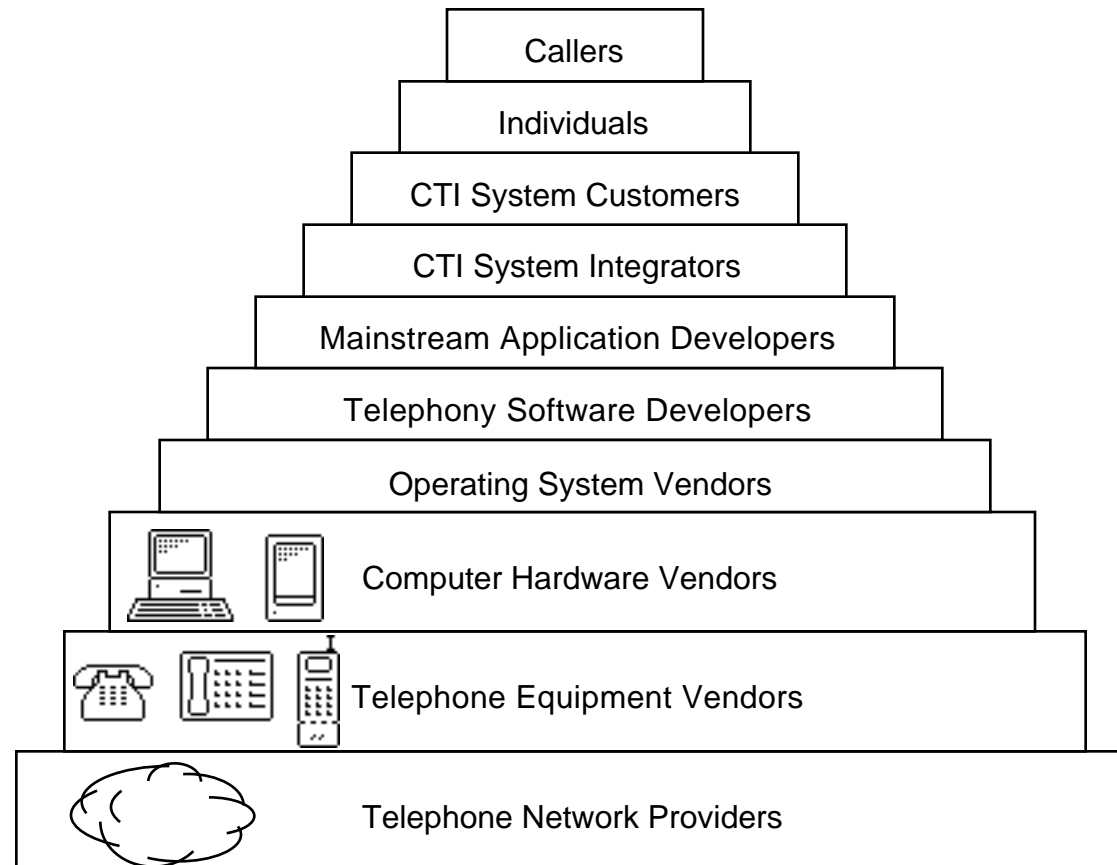

- **Customer motivation is for telephone systems...**
 - that are open and modular
 - present no barriers to computer telephony applications
- **IP Telephony is about...**
 - bringing the benefits of computer telephony to the switching fabric
 - componentizing the telephone system
 - eliminating dependence on a single vendor
- **Other new switching fabric options are just as significant**

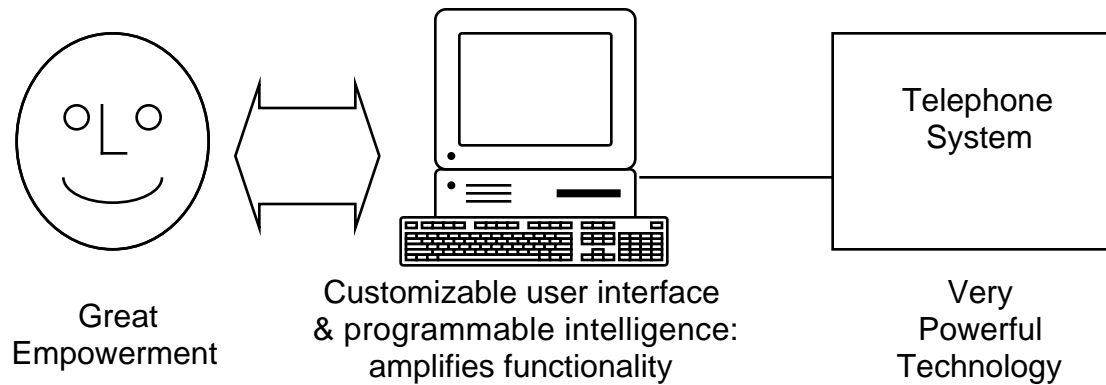

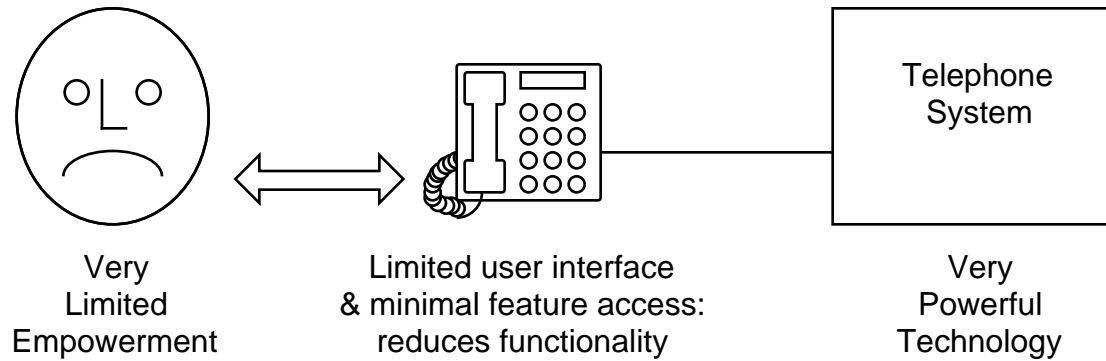

3.

Interoperability Specifications are the Key

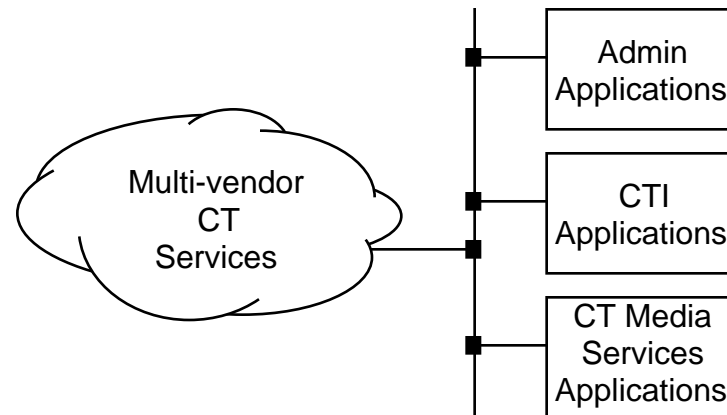

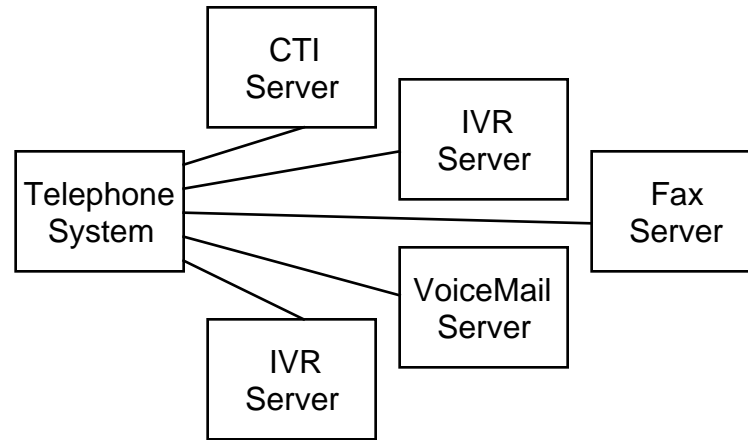

Value Chain — Product Requirements

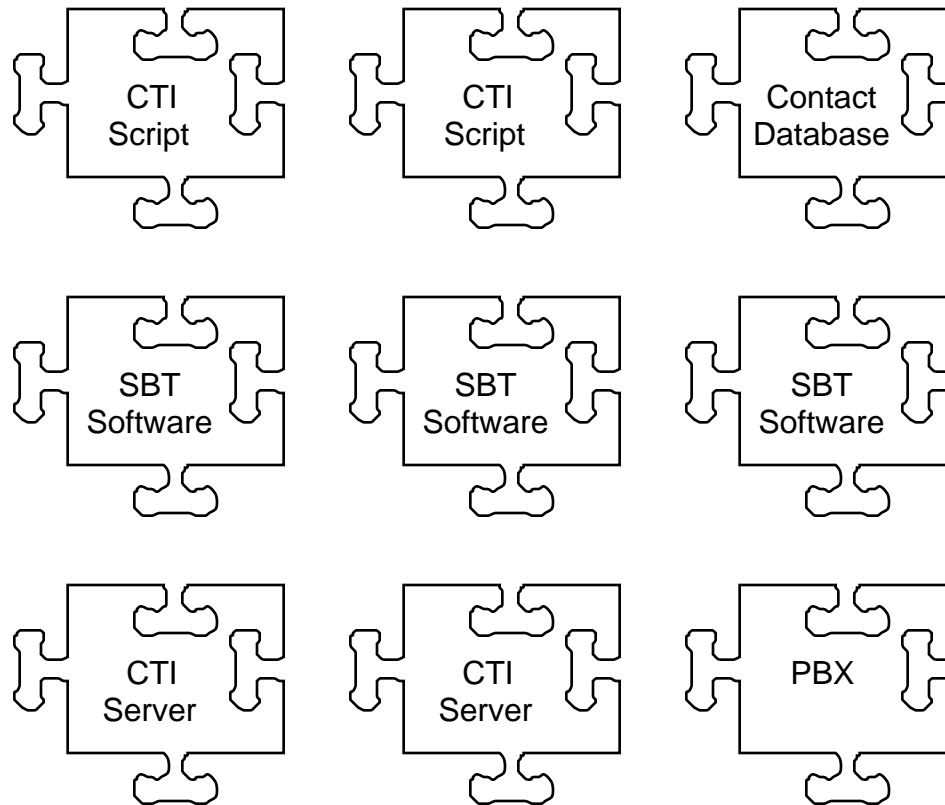

User Point of View

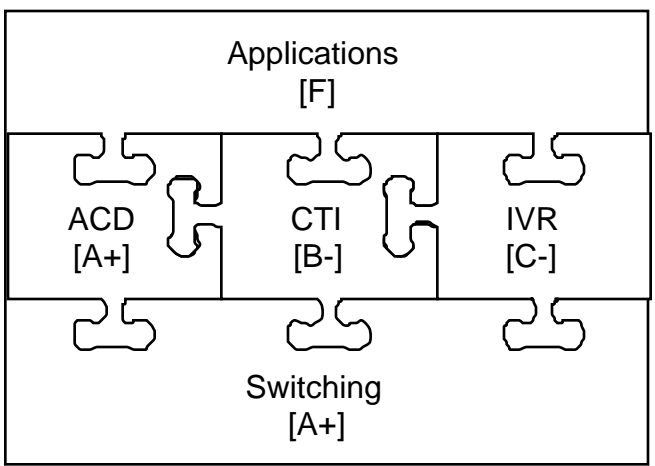

Customer's Point of View

Integrator's Point of View

Vendor's Point of View

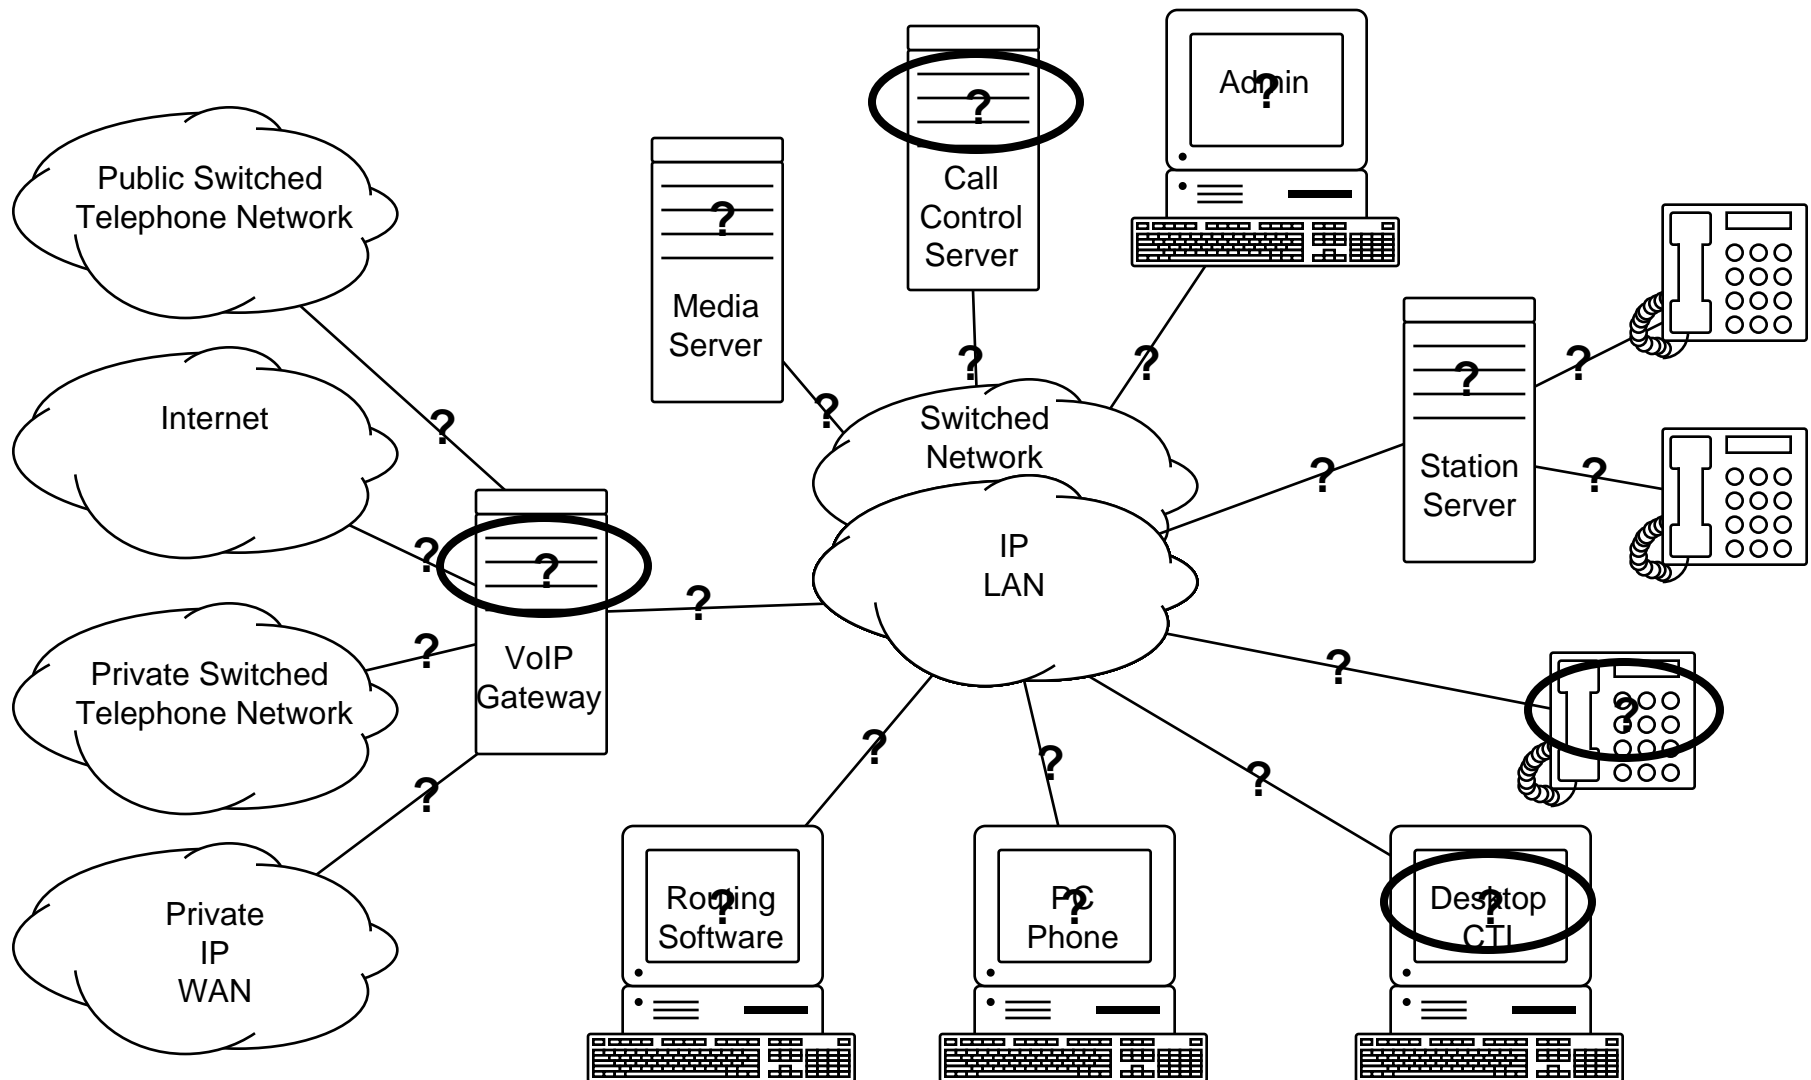

Focus on Modularity and Prioritize Interoperability

- Standards and other interoperability specifications allow for modular systems
- Modularity is a measure of maturity

Telephone System Implementation

Specifications and Standards

■ Standards Bodies

- ITU
- ANSI

■ Individual Vendors

- Microsoft
- Telcordia / Level3

■ Industry Organizations

- IETF
- ECTF

Three Types of Specifications

■ Models

- Agreement on terminology and concepts
- Standardized abstraction

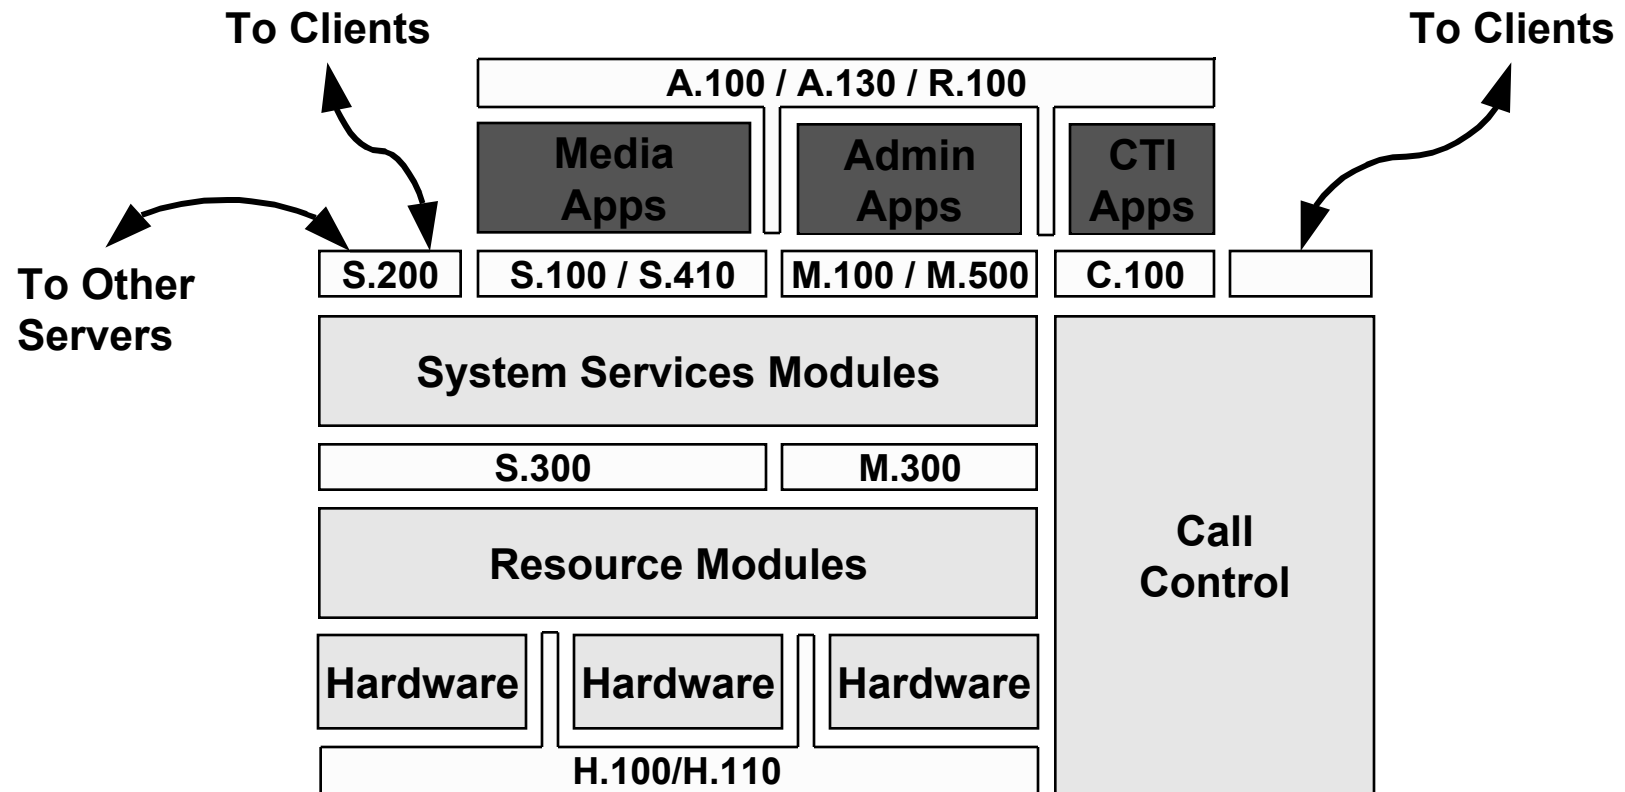

■ Programmatic Interfaces

- For software modules on the same platform
- May or may not be platform independent

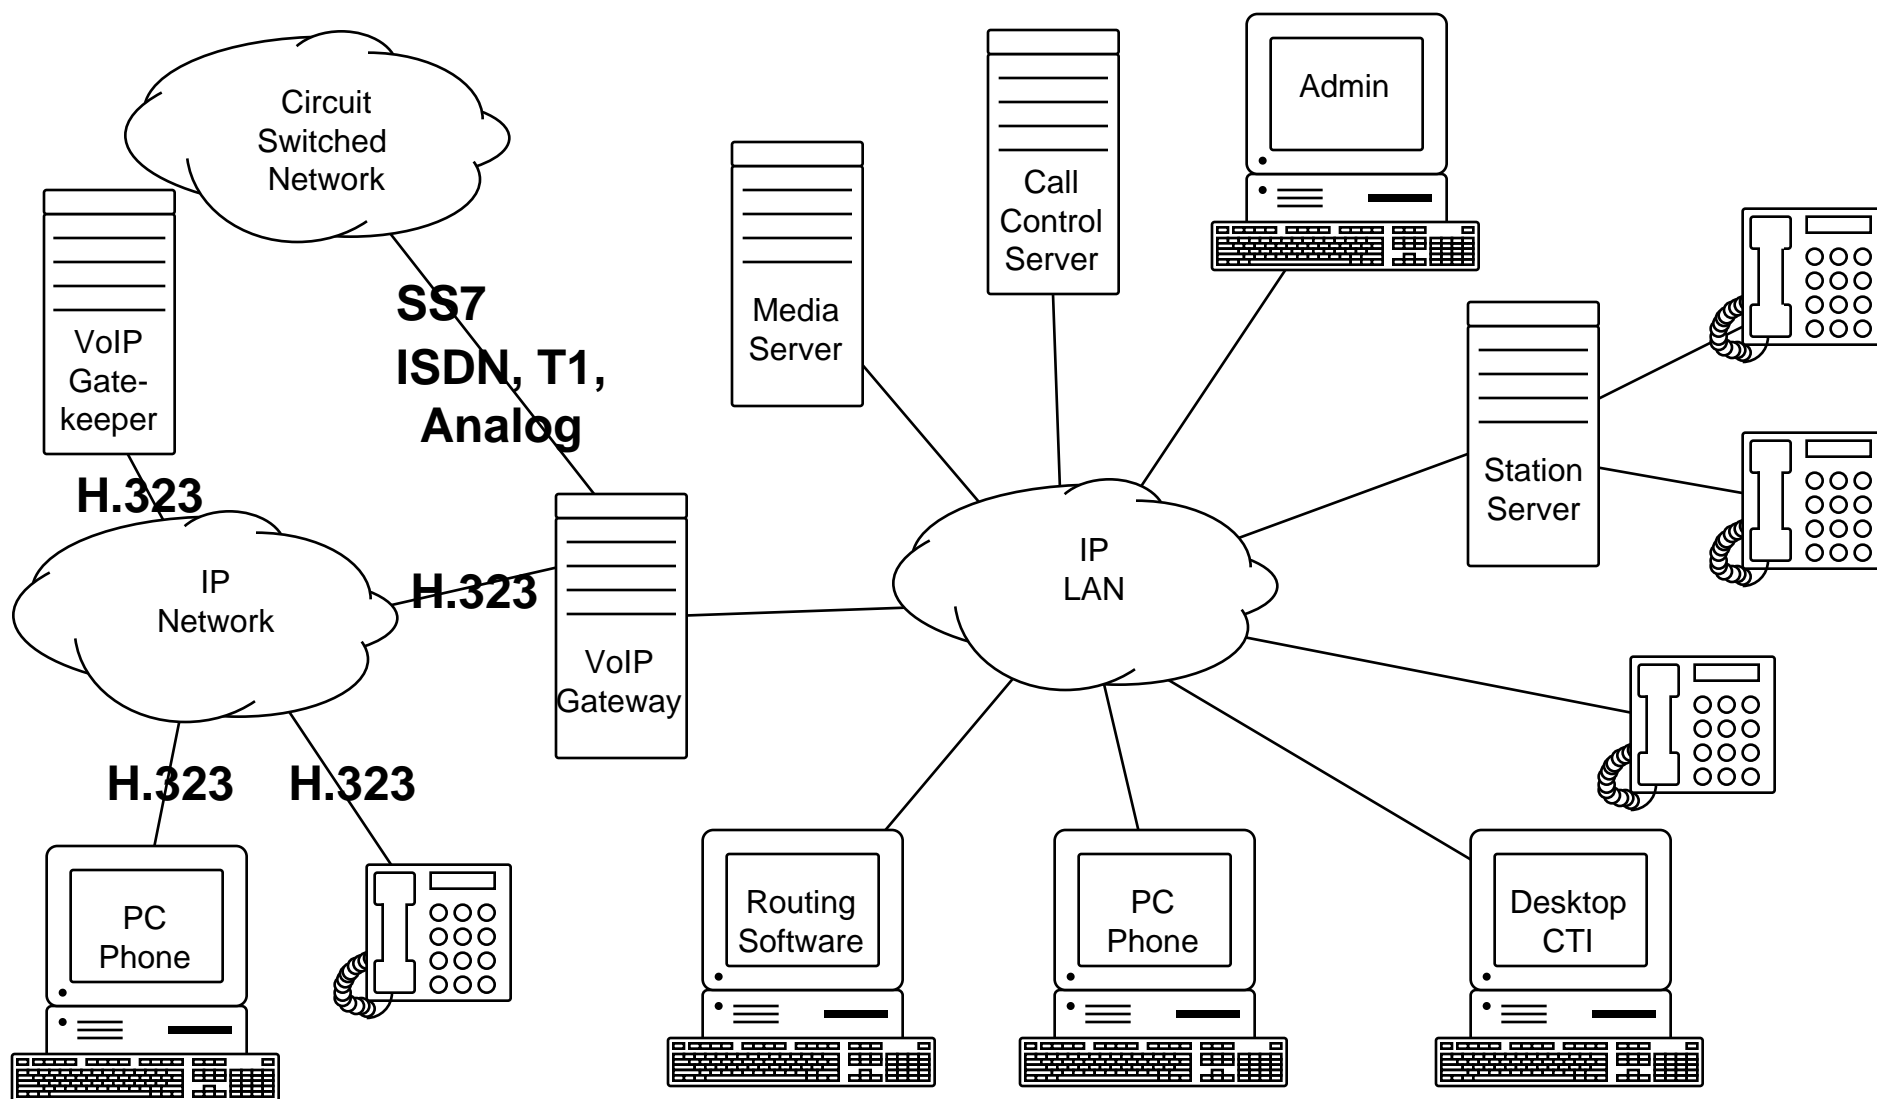

■ Protocols

- Platform independence
- Plug and Play interoperability

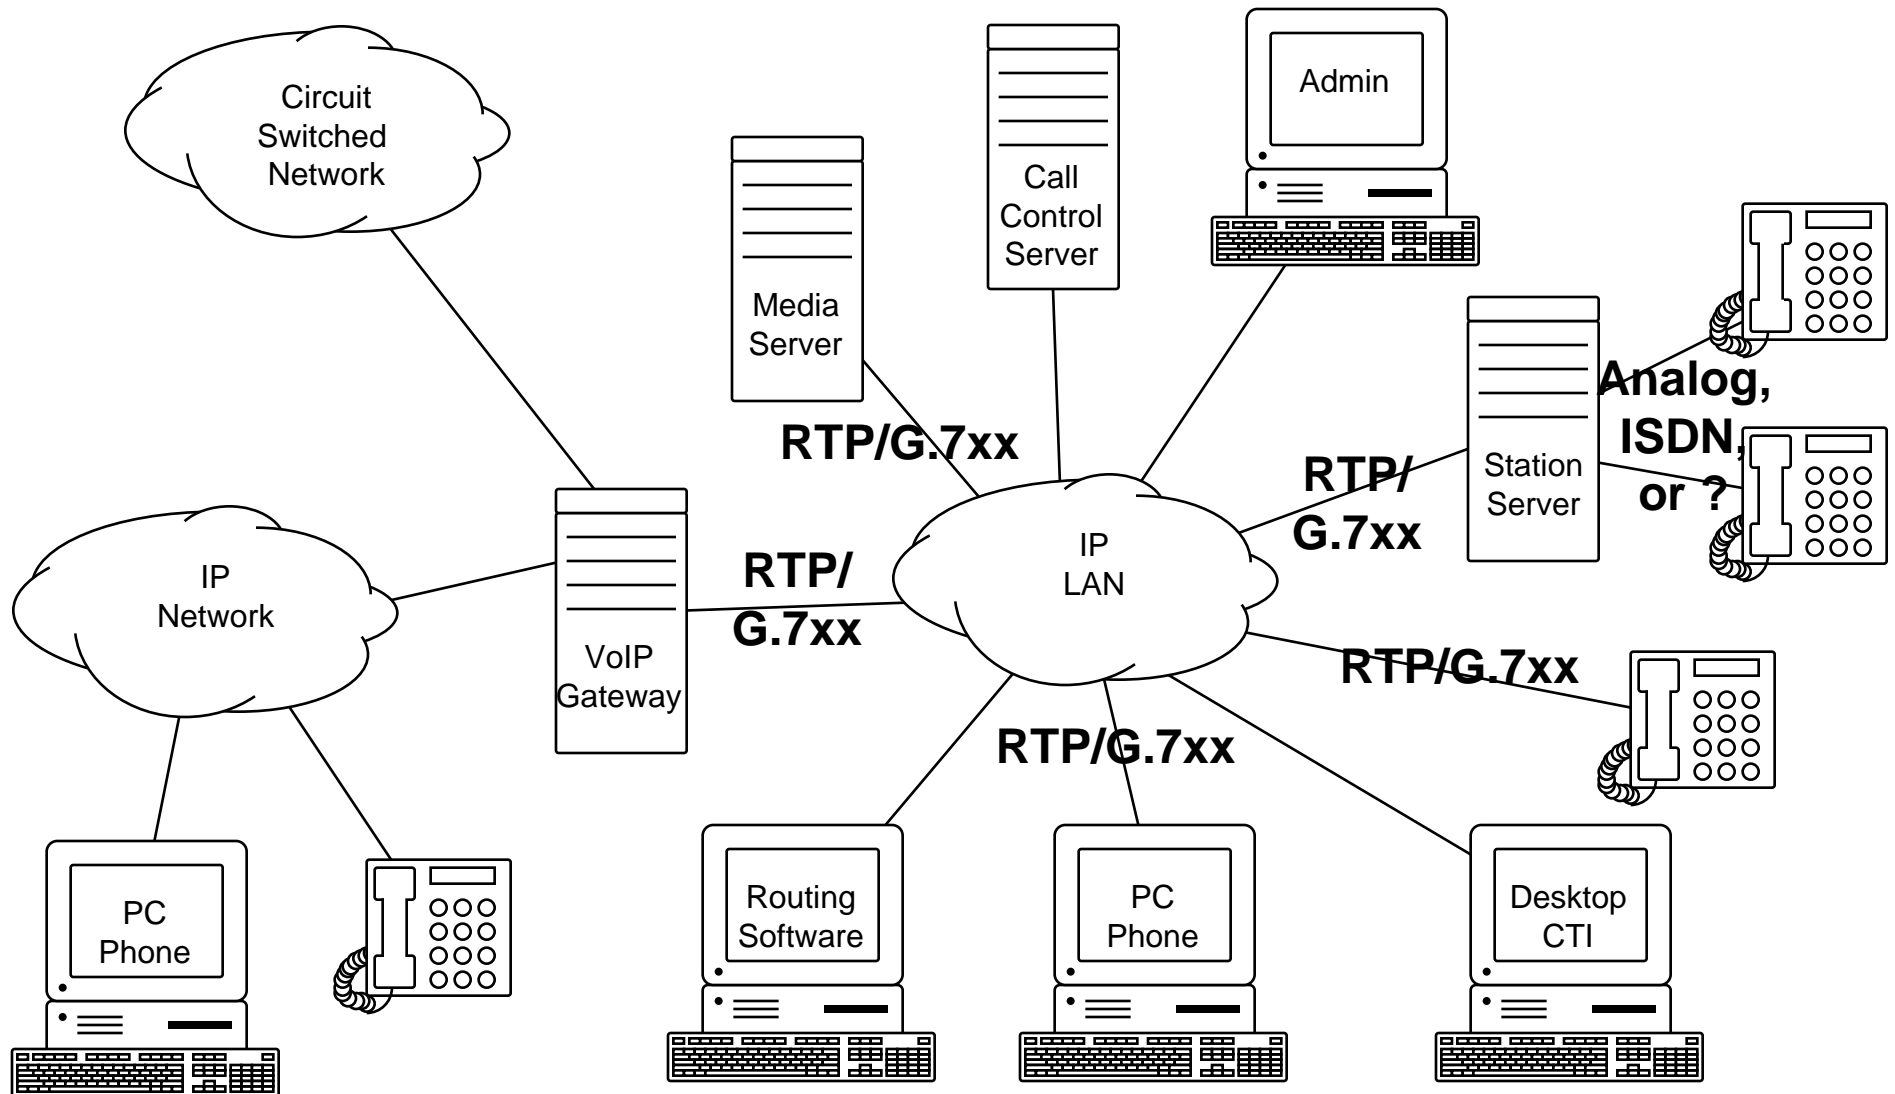

ECTF Framework

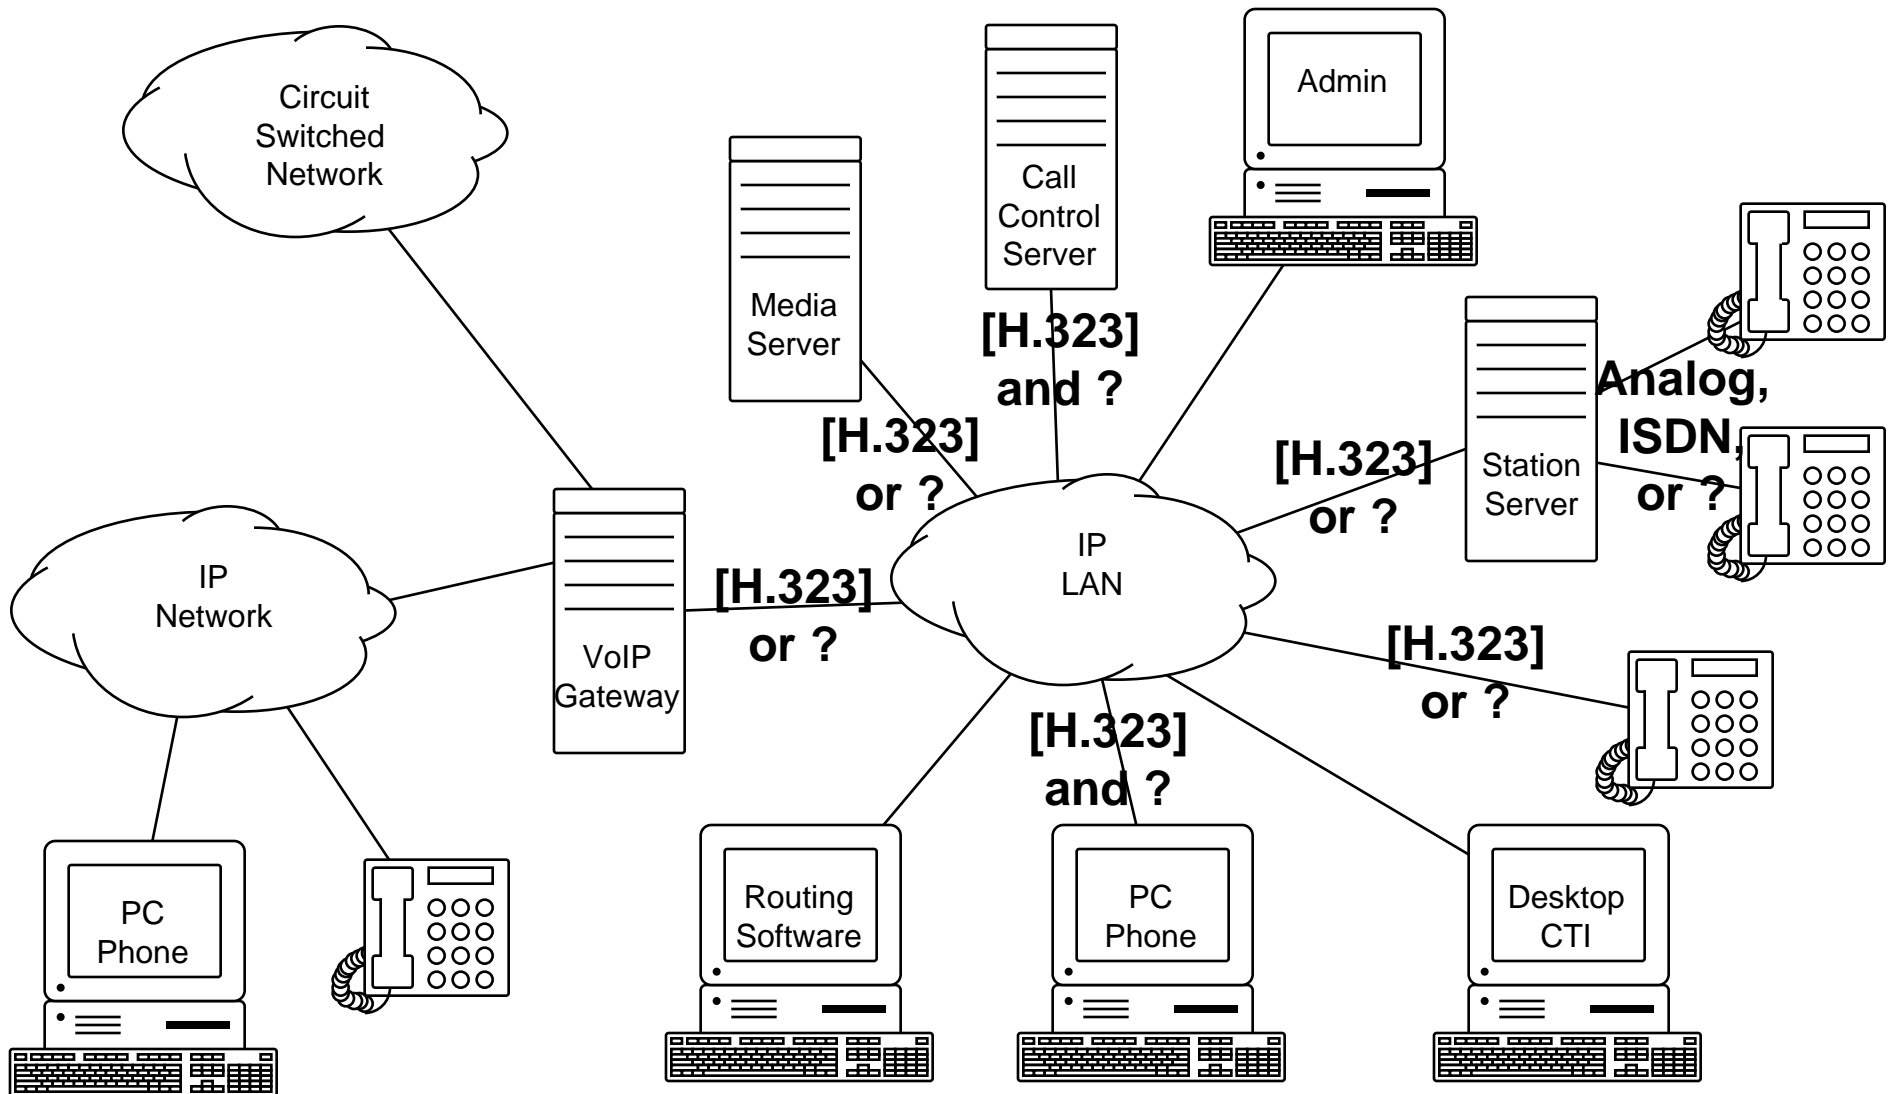

Public Network Switching/Signaling

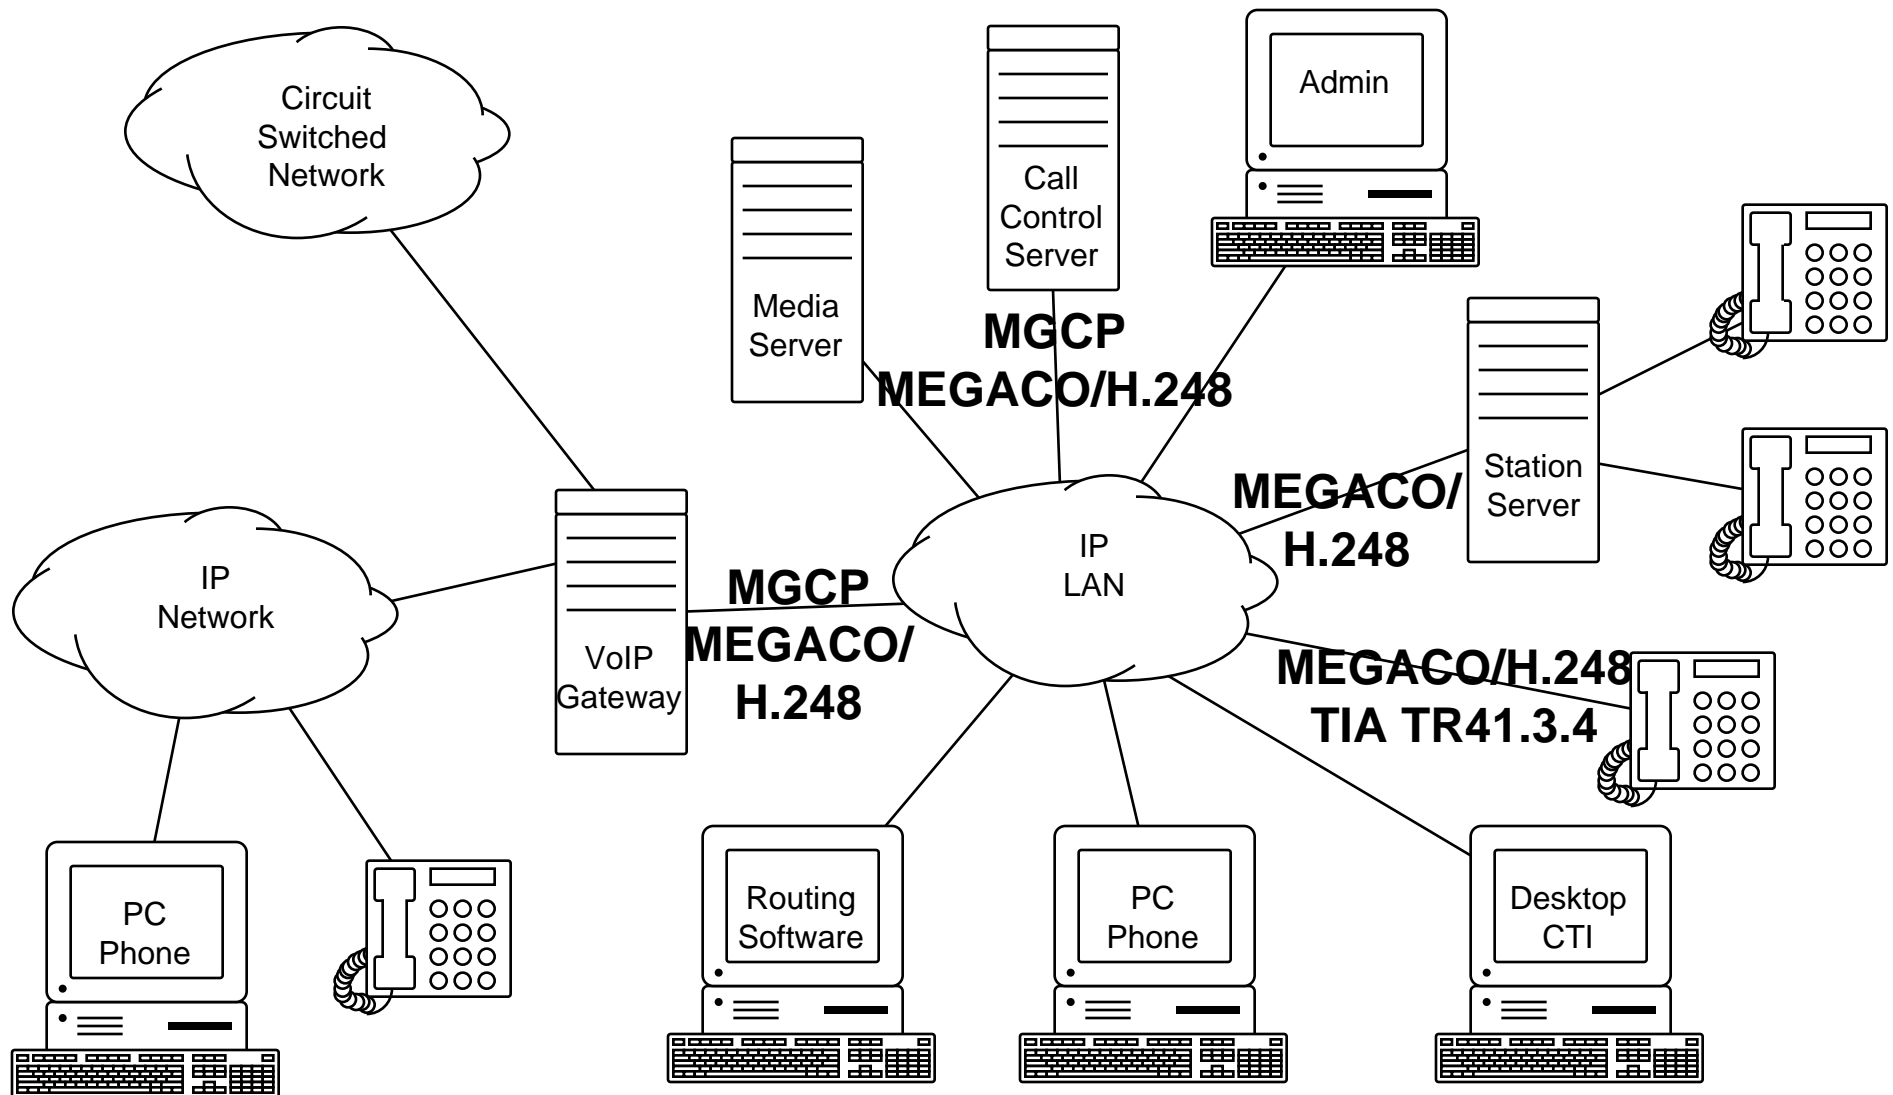

Switching: Media Streams

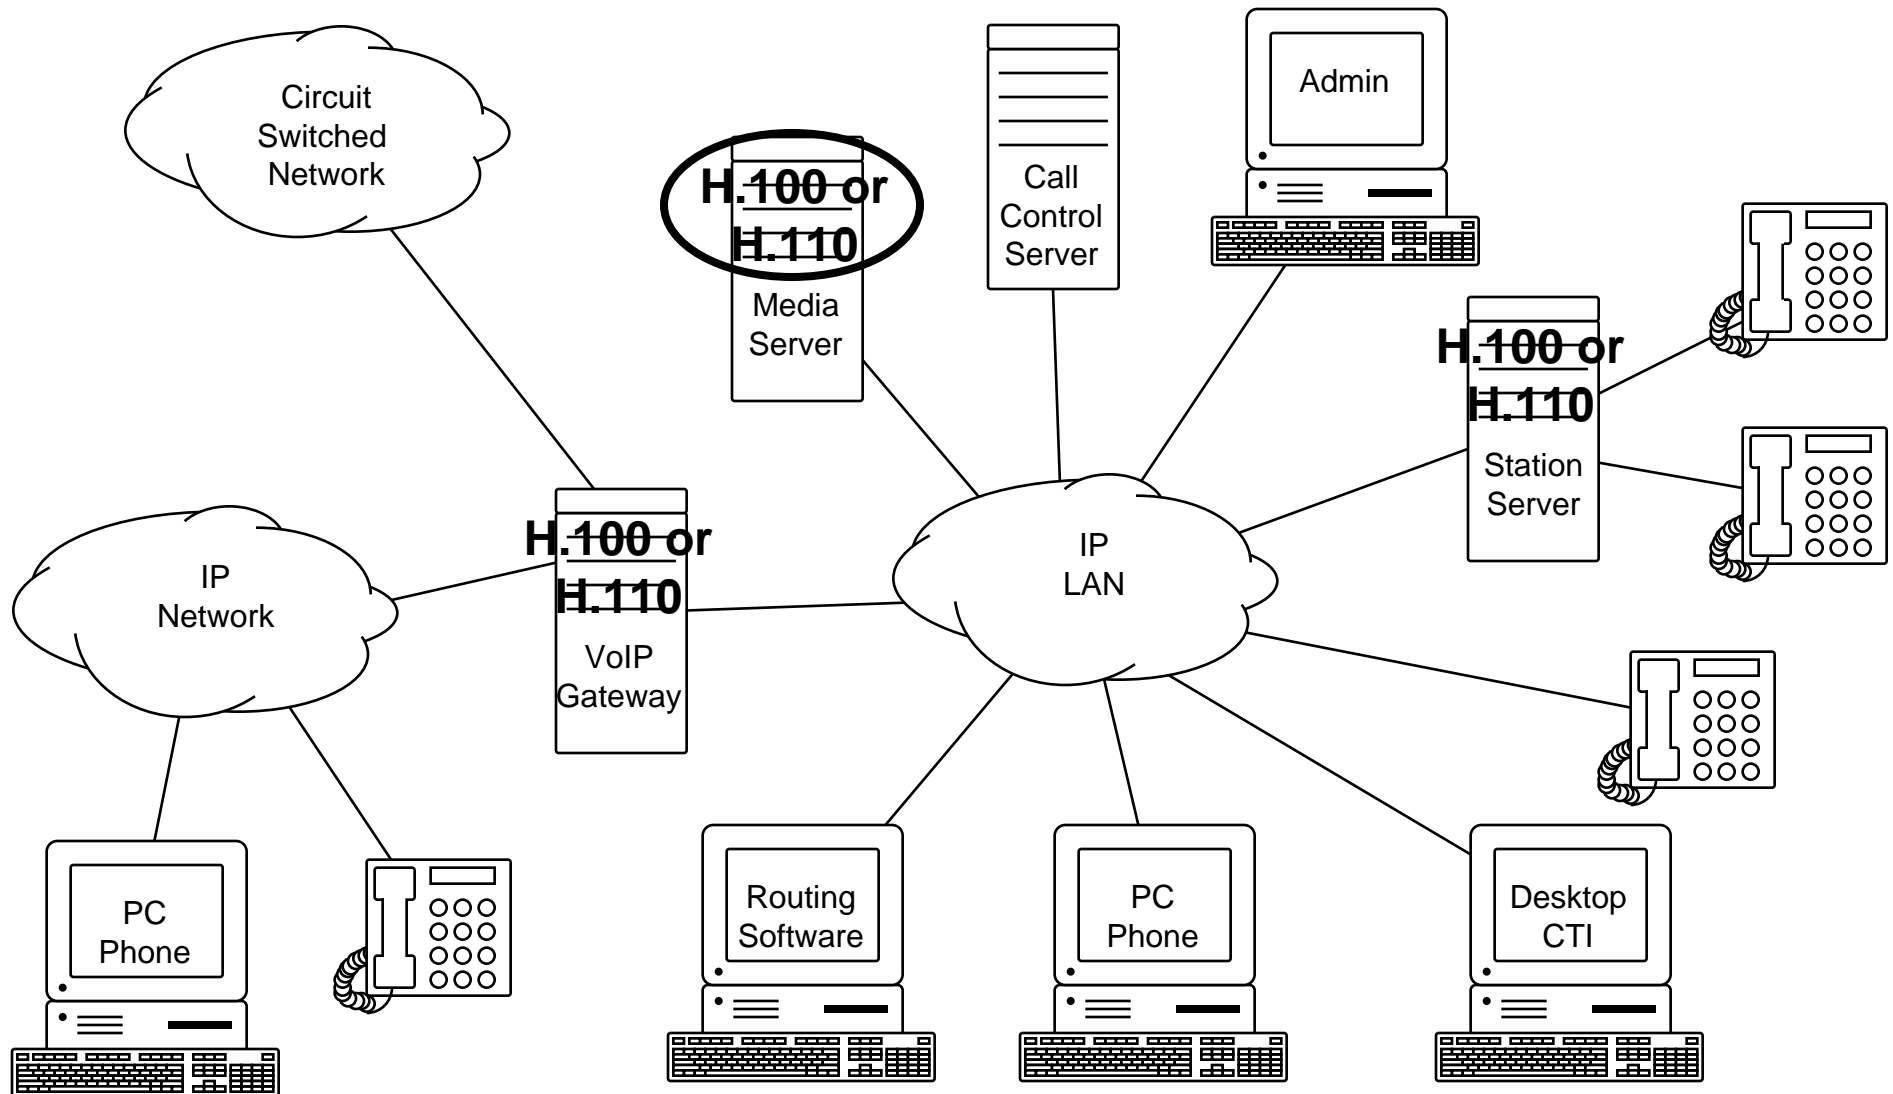

Switching: Signaling

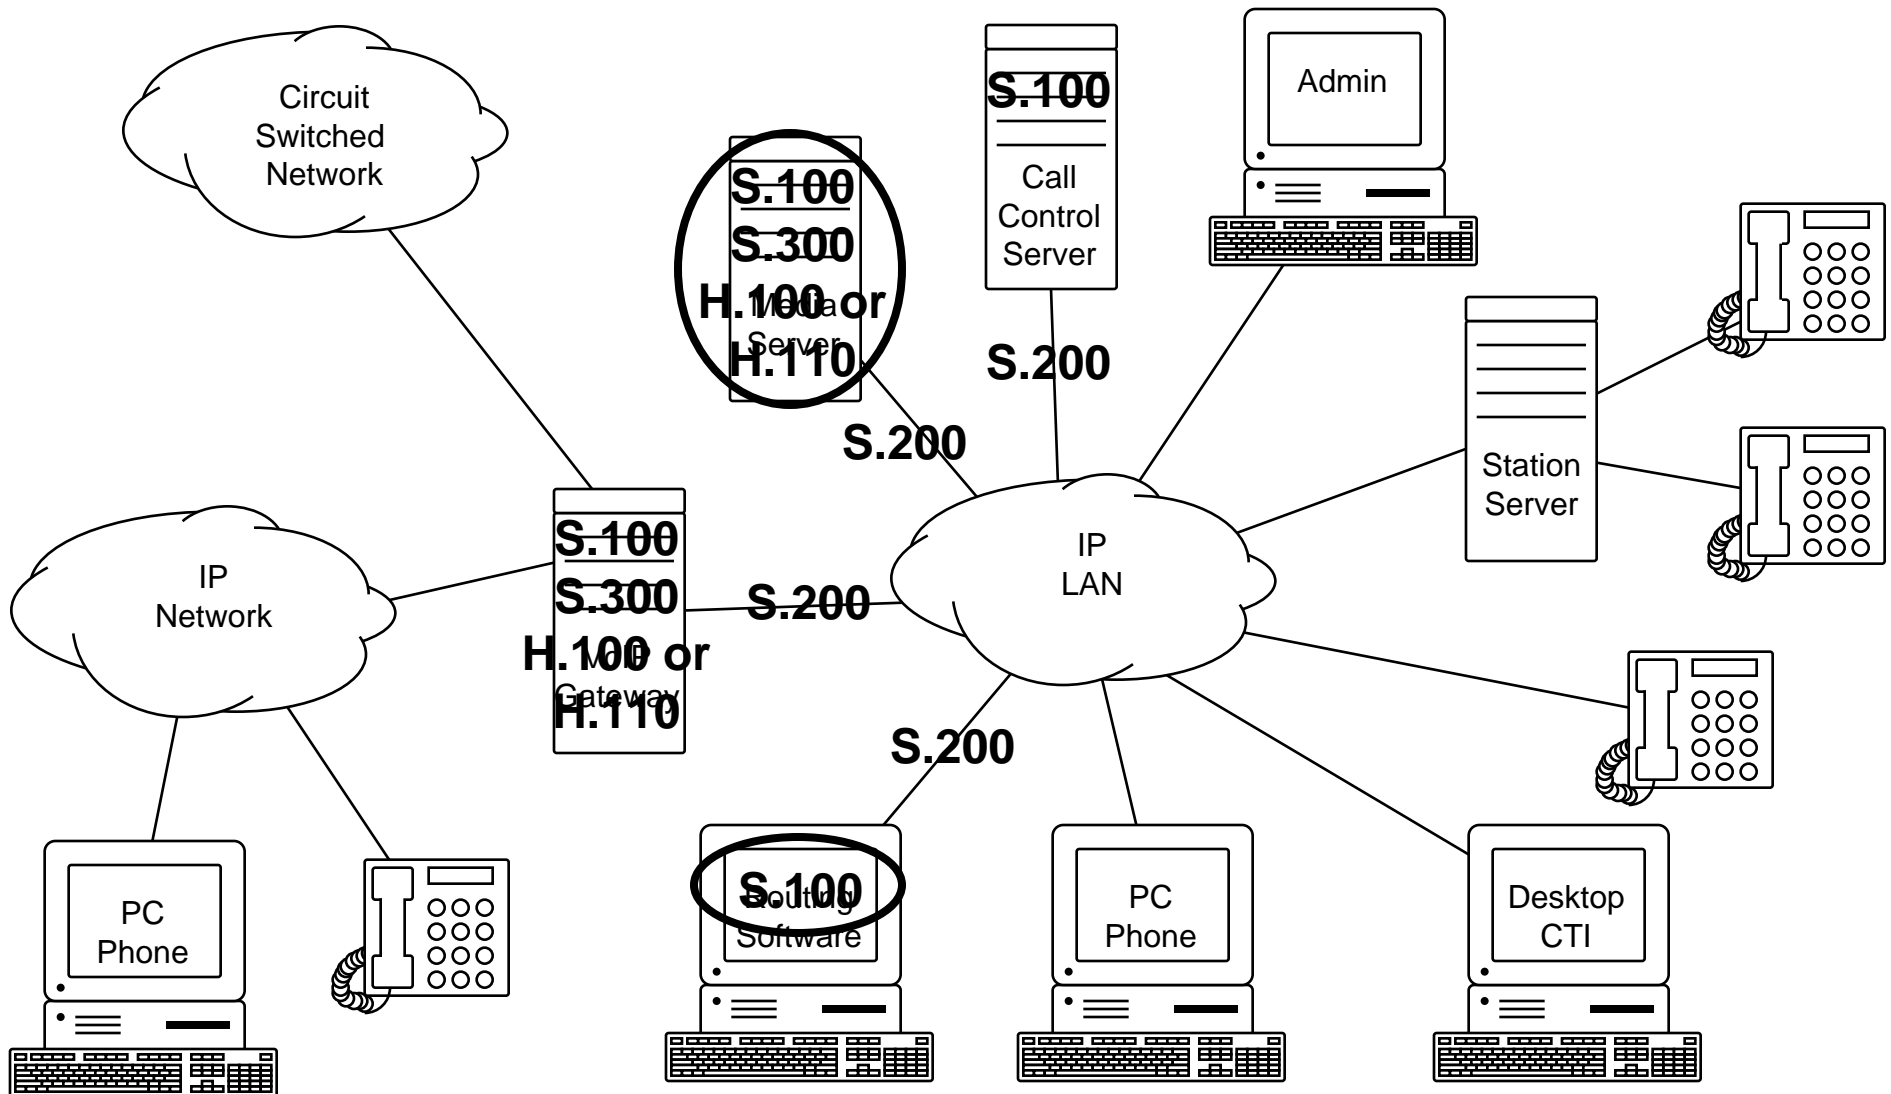

Switching Fabric Control

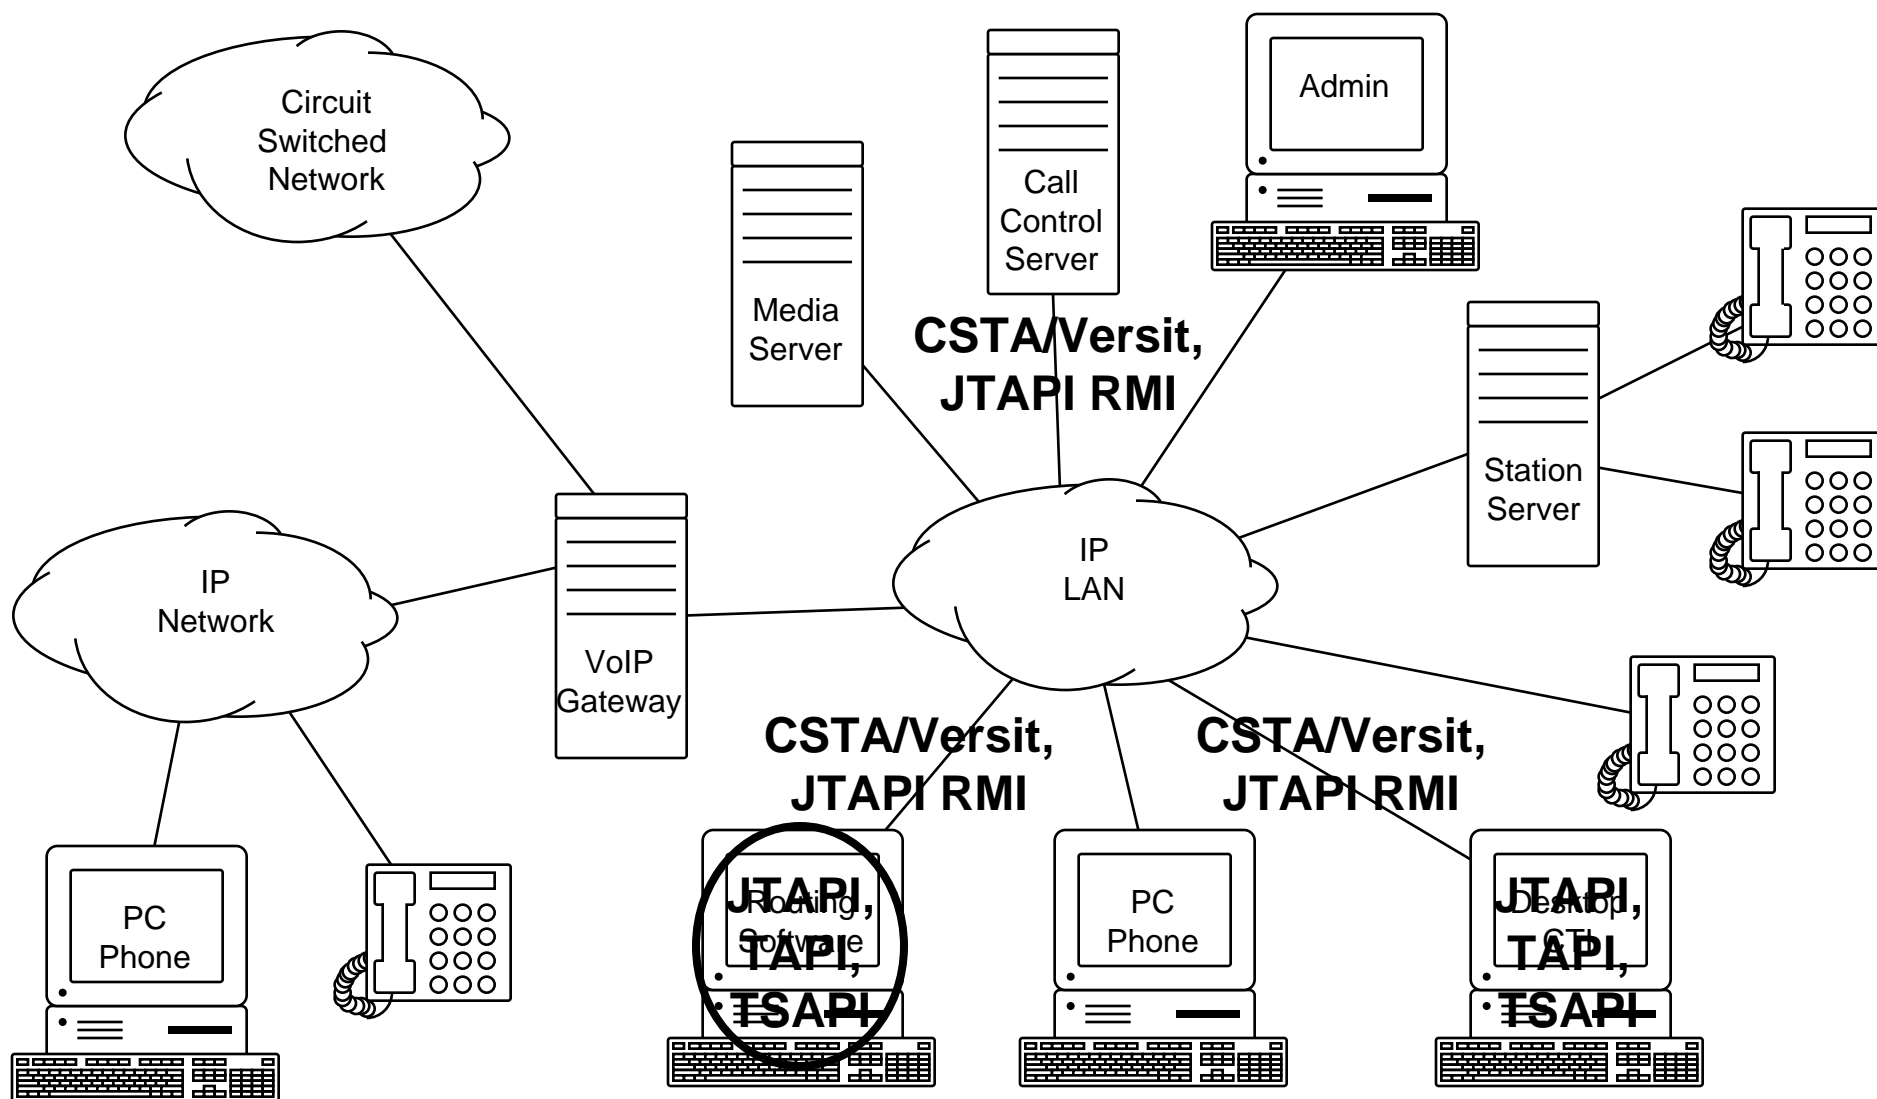

Switching Fabric: TDM Bus

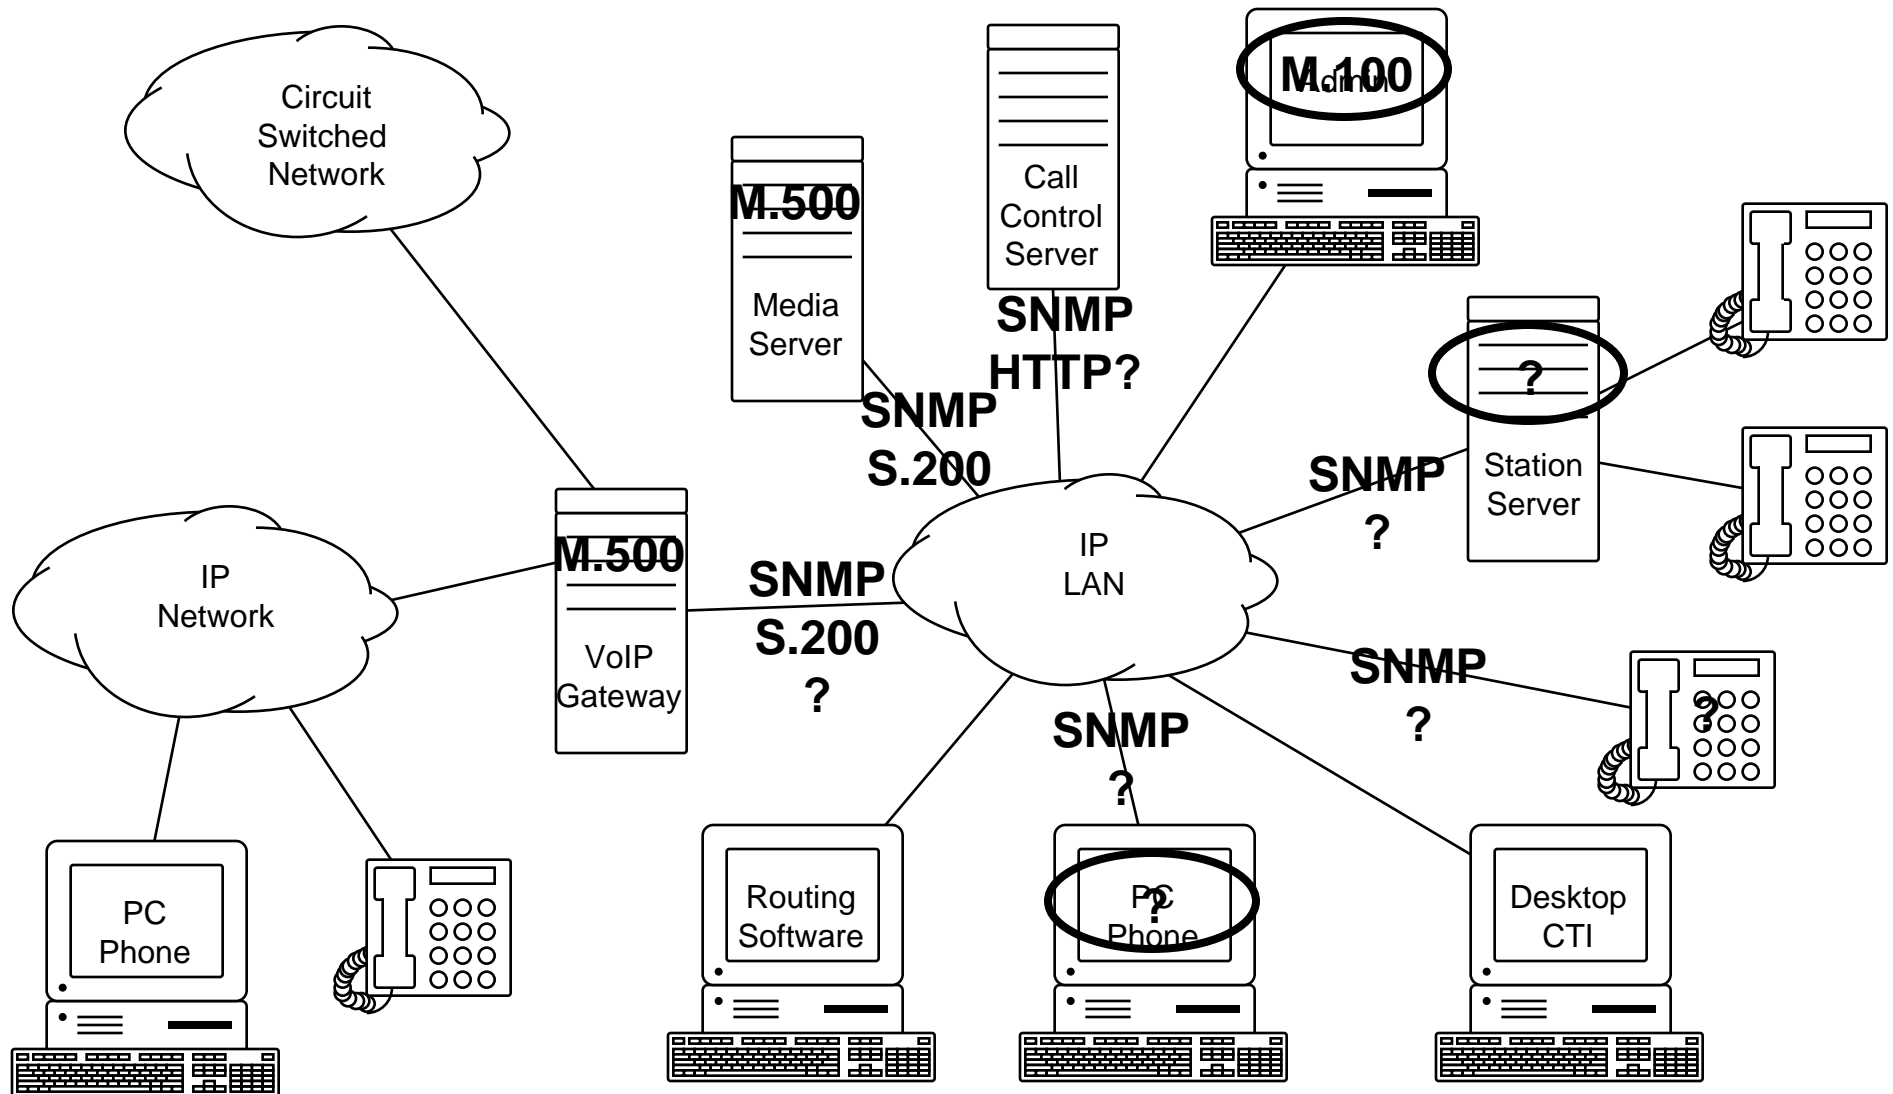

Media Services

CTI / Call Control

Administrative Services

Maturity Checklist

■ Framework

- ECTF

■ Call Model

- C.001

■ Published APIs / Multi-platform

- TAPI, TSAPI, JTAPI, S.100, M.100

■ Open Protocols

- H.323, MEGACO/H.248, Versit/CSTA, S.200

■ Plug & Play Products

4.

You are in the Driver's Seat

What should you be doing?

■ Get tough with vendors

- Get “Questions for Vendors” from the ECTF
- Encourage vendors to implement and ship products based on specifications (not just to talk about it)

■ Think modular

- Shop for components
- Support manageable diversity
- Build in a modular fashion by taking advantage of interoperability specifications wherever possible

■ Don't rush

- If appropriate, defer purchases or invest in products that will help you migrate over time

Become Familiar with Specifications

■ Standardized terminology

- Allows comparison of different vendor's products

■ Standardized models

- Provides framework for designing solution independent of specific products
- Serves as checklist for product features

■ Resources include:

- www.ECTF.org
- www.CTExpert.com

Know Your Requirements

- Don't take anything for granted
- What do you have that you don't really need?
- What do you need?
- If it ain't broke don't fix it
- Leave all your options open

Know your Priorities

- Where do you stand to gain the most benefit?
 - CTI Applications?
 - Media Services Applications?
 - Admin?
 - Switching Fabric?

Four Things to Remember

- CT is the future
- IP Telephony is a catalyst
- Interoperability specifications are the key
- You're in the driver's seat
